Medication Assisted Treatment

hosted by

Solutions Recovery

2975 S. Rainbow, Ste C

Las Vegas, NV 89146

Purpose

Medication Assisted Treatment is the buzz phrase in addiction, meaning different things to different people. Many people have passionate beliefs about a particular approach and what's the most effective treatment option: Abstinence, Methadone, Buprenorphine and Naltrexone...

See medical experts discuss all four and a handful of other drugs such as Campral, Gabapentin Topomax, and various others. Pros, cons, and spirited debate all emceed by two Channel 5 news anchors! Bring your questions, share your experiences, and get continuing education credits at this cutting edge, informative presentation by the State of Nevada Association of Addiction Professionals (SNAAP) a subsidiary of NAADAC.

Schedule

8:30-9am: Check-in Registration
9-9:15am: Opening Statement - Jamie Ross PACT Coalition
9:15-10am: Buprenorphine - Dr. Lesley Dixon
10-10:45am: Methadone - TBA

Medicated Assisted Treatment

Lesley Dickson, MD, FAPM, LFAPA

- Buprenorphine Management of Opioid Use Disorder

Robert Lynn Horne, MD

- Medications to decrease craving for alcohol and to prevent relapse on alcohol. Medications to decrease craving for opiates and to prevent relapse on opiates. Medications to decrease craving for cocaine and amphetamines.
- Pharmacogenetic testing in 2018 is used to determine how a person metabolizes (breaks down) medications

Joseph Bradley, DC

- Abstinence is a necessary component of recovery. Abstinence as the precursor to Recovery includes many resources: MAT, Mutual Support Groups and a pursuit of the life wished to be lived.

Stephanie Woodard, Psy.D., Licensed Clinical Psychologist

- 1) Overview of State policies related to MAT
- 2) Systems of care and accessibility to high quality MAT services
- 3) Treatment and recovery supports in Nevada and the role of providers in reducing risk for individuals with OUD

Judge Cynthia Cruz

- Panel - Q & A
